IIT Bombay, India (2018-2022)

PROFESSIONAL SUMMARY

Senior Backend Engineer specializing in scalable distributed systems and enterprise platform development. Strong in microservices architecture, API security, distributed caching, and performance optimization. Experienced in designing high-availability services, internal developer platforms, and AI-enabled solutions that improve scalability, reliability, and operational efficiency across business-critical fintech systems.

TECHNICAL SKILLS & TOOLS

- **Languages**: Java, Python, SQL
- **Backend & Architecture**: Spring Boot, Microservices, REST APIs, Hazelcast, OAuth2, Eureka, LLM Integration
- **DevOps & Tools**: Docker, OpenShift, CI/CD, Jenkins, Git, Bitbucket, JIRA, Locust, React

WORK EXPERIENCE

Senior Software Engineer (SDE-III) – KYC Technology | Citi *[Apr'25 - Present]*

- Developing AI-powered KYC document processing platform with asynchronous Spring Boot microservices**,** reducing manual validation effort by **50%** and enabling scalable processing of **10K+ documents/day**
- Designed and implemented end-to-end microservices architecture for internal fintech platform, including **centralized API Gateway** (OAuth2), **Eureka-based service discovery**, distributed caching, and observability layers; reduced authentication overhead by **~30%** and achieved **99.9% service availability**
- Architected an **AI-driven Sprint Analytics platform** generating JIRA-linked performance insights and enabling low-latency enterprise reporting through a **distributed caching layer**

Software Engineer (SDE-II), Citi Commercial Bank | CitiBank *[Jul'23 - Apr'25]*

- Spearheaded backend development of a **global skill analytics platform**, integrating **Hazelcast-based distributed caching** to reduce API latency and improve throughput by **2x**
- Independently designed and built a distributed load simulation platform with CI/CD integration and no-code scenario configuration, enabling simulation of **10K+ concurrent users**
- Modularized legacy monolith into a micro-frontend architecture to improve deployment agility and system maintainability

Developer, Client Insight Analytics | CitiBank *[Jul'22 - Jul'23]*

- Built trade fee approval microservices processing **650+ tickets/month** covering **$37M+** trade volume; reduced manual handling time by **80%**
- Implemented an observability stack using **Istio service mesh** on OpenShift, enabling in-depth telemetry, tracing, and performance monitoring
- Improved API efficiency and optimized database queries by redesigning backend contracts during migration from PrimeNG to AG Grid, improving dashboard load time by **40-60%**

PROJECTS

Load Simulator Tool | Citi Project *[Dec'23 - May'24]*

*Placed in **Top 3 out of 80+** Process Improvement Recommendation Project at Citi for year 2023-24*

- Independently built Microservices API tool with automated testing, CI/CD integration and monitoring metrics
- Designed a scalable, low-latency architecture with robust access control and accurate load-testing metrics

AI-Driven Social Intelligence & PromptOps Platform *[Feb'26]*

- Architected a multi-source profile intelligence system integrating structured APIs with fallback ingestion strategies, implementing rate limiting and caching
- Built a Prompt Lifecycle Management platform with prompt versioning, feedback collection, automated response evaluation, and approval-based release workflows to improve reliability of AI-driven outputs.

ACCOMPLISHMENTS

- **Person of the Year (2021-22)**: Recognized for overall performance and cross-initiative impact
- **International Rank 37** - International Mathematics Olympiad
- **Brand Ambassador - Citi Young Talent**: Competitively selected to represent Citi at campus hiring and career showcases; mentored new joiners and delivered tech/community engagements
- **CBSE Mathematics Topper** (2017-18)
